Google visibility check

For a site made with ChatGPT or an AI builder. Ten minutes, all free. Tick each line once it passes, and write the date you checked.

CHECK	WHAT PASSING LOOKS LIKE	PASS	DATE
Online at your own address	Opens at https://yourbusiness.com, not a preview or builder address	☐	
No noindex tag	View source, search for noindex: not found	☐	
robots.txt lets Google in	yourbusiness.com/robots.txt has no Disallow: / and lists your sitemap	☐	
Text is in the page source	View source shows your headline and paragraphs, not just an empty box	☐	
Search Console set up	Domain verified, sitemap submitted, status Success	☐	
Home page inspected	URL Inspection says URL is on Google, or indexing requested once	☐	
Real, checked content	A page per service, your town, your photos, every fact checked	☐	
Old addresses redirect	Builder or preview addresses send people to your own domain	☐	

Tip: request indexing once, then give it a few days to a few weeks. Asking again doesn't speed it up.
